## Introduction

**This publication sets out a fundamental overview of the living standard in the Czech Republic in the years 1993 - 2006 (for the duration of the independent Czech Republic).**

The publication uses the data of **Czech Statistical Office (CZSO)**, **Czech National Bank (CNB)**, **Ministry of Labour and Social Affairs (MLPA)** and own calculations of **Department of Income policy**.

**Income and Expenditure** of Households **document data of Household Budget Survey** (concrete types of households) and **National Budget Survey** (sector of households - macro).

**Household Budget Survey:** listed in the tables are data from the sample survey of household budgets. Households (respondents) included in household budget statistics are sampled by the method of purposive quota sampling. Measured were the social groups of **employees** (persons having a contract of employment, who do manual work in the area of production, transport, services, etc., or intellectual work at all levels such as managerial, conceptual and scientific, operational, technical, services (other employees), **self-employed persons** (persons having no contract of employment, but are engaged in business except for agriculture), work freelance or work for fees, **farmers** (persons who are engaged in agricultural production and are either members of and work for an agricultural cooperative or are engaged in agricultural production in enterprises of any kind or are self-employed in agriculture production, pensioners (pension recipients who do not work at all or whose economic activity is restricted and restriction also applies to other members of the household. Supplementary sample comprises **families with children**, living just at subsistence level.

**Net household income** defined for the sake of quota sampling **is calculated as gross income less the total of income taxes and compulsory health and social insurance contributions.** Loans, credits, and withdrawals of savings are not included.

**Structure of household incomes** included incomes from employment, social and other.

**Nett household expenditure** (defined for the sake of quota sampling) **is calculated as gross expenditure less the total of income taxes and compulsory health and social insurance contributions.** Deposits and repayments of loans are not included.

**To ensure international comparability of the statistical indicators, the items of money expenditure were re-arranged to comply with the national version (CZ-COICOP)** of the International Classification of Individual Consumption by Purpose.

**All data of Household Budget Survey are per-capita calculations,** if you need results for household in total, you can use table in the end of this text.

As the complement of income characteristics are in the table 4 and table 5 stated basic data about incomes, expenditures and deposits of **households sector** (by National Accounts for Households Sector).

**The data presented wages were obtained by a survey taken of the Czech Statistical Office:** in the years 1993 - 1994 were obtained (in business sphere) all firms with more than 24 employees, in the years 1995 - 1996 more than 25 employees (in industry, trade, entertainment and accommodation more than 100 employees) and in the years 1997 - 2002 more than 20 employees – per physical person. All years this publication includes data of part of the Ministry of Defence of the CR and the Ministry of Interior of the CR. The data on monthly gross wages broken down by industry correspond to the Branch Classification of Economic Activities - OKEČ (CZ-NACE).

To ensure international comparability of the statistical indicators, the items of **money expenditure** were re-arranged to comply with the national version of the international Classification of Individual Consumption by Purpose (CZ-COICOP). The coverage of the items of the expenditures is evident from their names. In expenditure item named "miscellaneous goods and services" is :personal care, things for personal use and accessories, social care expenditure, all type of insurance, financial services, etc.

Trends in **consumer prices** are measured on consumer baskets based on a set of selected kinds of goods and services paid for by population. Goods and services which have a significant share in the expenditure of households are chosen to be price representatives. The current consumer basket includes about 790 particular goods and services (representatives) which are split into 12 divisions according to the national classification CZ-COICOP based on the international Classification of Individual Consumption by Purpose. The base period weights for the calculation of group and aggregate indices are derived from the structure of household expenditure derived from 1999 Household Budgets Statistics.

**Harmonized indices of consumer prices (HICP)** came into being in the EU in response to the need to establish comparable indices of consumer prices so that inflation trends in the EU member states to be used as a criterion for the accession to the European Monetary Union can be measured. There are certain differences between the structure of the consumer basket for the national index of consumer prices of the CR and the structure of the consumer basket for the HICP. The HICP weights include receipts from purchases made in the CR by foreigners and does not include hypothetical rent, whereas the national index of consumer prices includes hypothetical rent and does not include receipts from purchases by foreigners.

All data (exceptions are data about CPI) of the year 2005 are preliminary ones, data of National Budget are preliminary ones in all years.

Note: data indicated „x“ - in this year statistical survey did not exist.

**Average Number of Members in Households**  
**(Household Budget Survey - CZSO)**

	1993	1994	1995	1996	1997	1998	1999
